1. Which AI coding tools the team expects to use.
    a. Claude
2. What context should be supplied to those tools.
    a. General coding information for the present task
3. Expectations for reviewing generated code.
    a. Review before integrating and understand the functions instead of a simple copy paste, and then test
4. Expectations for validating generated dependencies or APIs.
    a. Make sure that the information gathered is verified and secure
5. Required testing before generated code is accepted.
    a. Write test cases for all generated code and make sure to fix any errors prior to acceptance
6. How AI session transcripts are retained for the project.
    a. Each group member has a chronologically organized folder per sprint containing any and all transcripts and conversations with AI models pertaining to the project
7. Situations where generated code requires additional security review.
    a. Anything that involves user data or authentication as well as anything that requires changes to external files
