1. Repository and folder organization.
    a. Each team member has their own branch that they regularly push and pull to origin
2. Naming conventions.
    a. Files should be snake case, ex. (temp_file), and variables should be camel case, ex.(tempVariable)
3. Formatting and linting expectations.
    a. Again, variables should be camel case, lines should fit on the screen, comments should be used when codes function is not obvious, spaces in code should be used at the coders discretion
4. Error-handling conventions.
    a. Catch and report user errors to the user, when possible, such as LLM issues or scraping failures.
5. API or service response conventions where applicable.
    a. Include success or failure in every response with the API, all API response should be in the form of JSON
6. Logging expectations.
    a. Mark the ticket you are currently working on and the do the daily standup
7. Expectations for adding dependencies.
    a. Keep them at a minimum whenever possible, to avoid merge conflicts and other issues with github
8. Expectations for testing new or changed behavior.
    a. Ensure to the best of your ability that it does not break any other functions, run it by group members prior to making any permanent changes and ensure it passes test cases. Pull requests should have a detailed description when they make important changes.
